PRESS RELEASE

COMACT UNITES CUTTING EXPERTISE THROUGH A PORTFOLIO OF ESTABLISHED BRANDS

VANCOUVER, BC, September 16, 2026 — Comact, a global leader in high-performance OEM wood processing technologies, announced today the launch of Comact Cutting Solutions, bringing together Smith Sawmill Service, Oleson Saw Technology, Checkmate Precision Cutting Tools, and the proprietary BLADE brand under a common organizational identity. Customers will continue to work with these established brands as they do today, with each maintaining its unique identity, expertise, products, and customer relationships.

Comact Cutting Solutions was created to reflect the collaboration that already exists across these businesses. While each brand will continue to operate under its own name, customers will benefit from access to a broader range of products, expertise, and resources backed by Comact's OEM knowledge of the complete sawmill.

“Bringing these businesses together within Comact Cutting Solutions reflects how we work with our customers: as one team focused on the performance of their entire cutting operation,” said Dustin Norris, Vice President of Comact Cutting Solutions. “Our expertise goes beyond the cutting tools themselves. We work alongside customers to address operational challenges and improve cutting performance, backed by Comact's deep understanding of mill operations.”

The Comact Cutting Solutions portfolio includes circular saws, bandsaws, knives, guides, filing room equipment, consumables, and related products. The organization also partners with ISELI, a global leader in precision machinery and technology for professional filing room operations, and serves as the exclusive ISELI dealer in the United States.

Customers will continue to work with the same brands, companies, and teams they know today, with Comact Cutting Solutions bringing together complementary expertise, products, and resources—all backed by Comact's OEM expertise.
